

Die-cut lids, labels

Expert manufacturing, short lead time

TekniPlex delivers a wide variety of customized die-cut lids to effectively seal to commonly-used tray materials. Die-cut lids are produced with exacting standards to meet user requirements.

OVERVIEW

Backed by more than 30 years of die-cut lid manufacturing experience, TekniPlex has both the technical knowledge and the production efficiency to meet your product objectives. Our short lead time means we can get die-cut lids to your manufacturing location just-in-time to meet your tight deadlines.

Here are just a few ways TekniPlex can meet your die-cut lid performance objectives:

- **Die-cut lid materials** including coated paper (70 pound), coated Tyvek® (1073B and 1059B) and foil laminates
- **Lids seal to most common tray materials** including PETG, HIPS, PE, polyester, PVC, PP, PX (TekniMD®)
- **In-house print plate production** and pre-press services
- **In-house die design** and maintenance
- **Printing capability** up to four colors in-line flexographic printing, with double-sided register to meet product identification requirements
- **30-plus years of manufacturing experience** (Ashland, MA plant)
- **Applications include** cardiovascular, orthopedic, diagnostics and injection systems
