

Tubes with applicators

Injection molded tube available with five different applicator types to hygienically-dispense a variety of products

OVERVIEW

- Available in two shapes (round and oval).

- Capacities: 3 ml, 5 ml, 8 ml and 10 ml.

- Four silicone applicators (smooth, nodules, bristles, ridged) and one low density polyethylene (LDPE) taper-tip applicator to accommodate various product characteristics and surfaces to be treated.

- Over cap protects the applicator and allows the tube to be reclosed to preserve product contents.

- Injection molding technology produces consistent and even tube sidewalls.

- Design facilitates squeezability for easy dispensing.

- Suitable for pharmaceutical, medical device applications and cosmetic products.

- Customization options include different tube colors, labeling, and silk-screen printing.

- Applicator tips allow your hands to stay clean during and after dispensing.

- Consistent product flow suitable for medical device and skin care applications.
